Constructor Championship Points Across Seasons

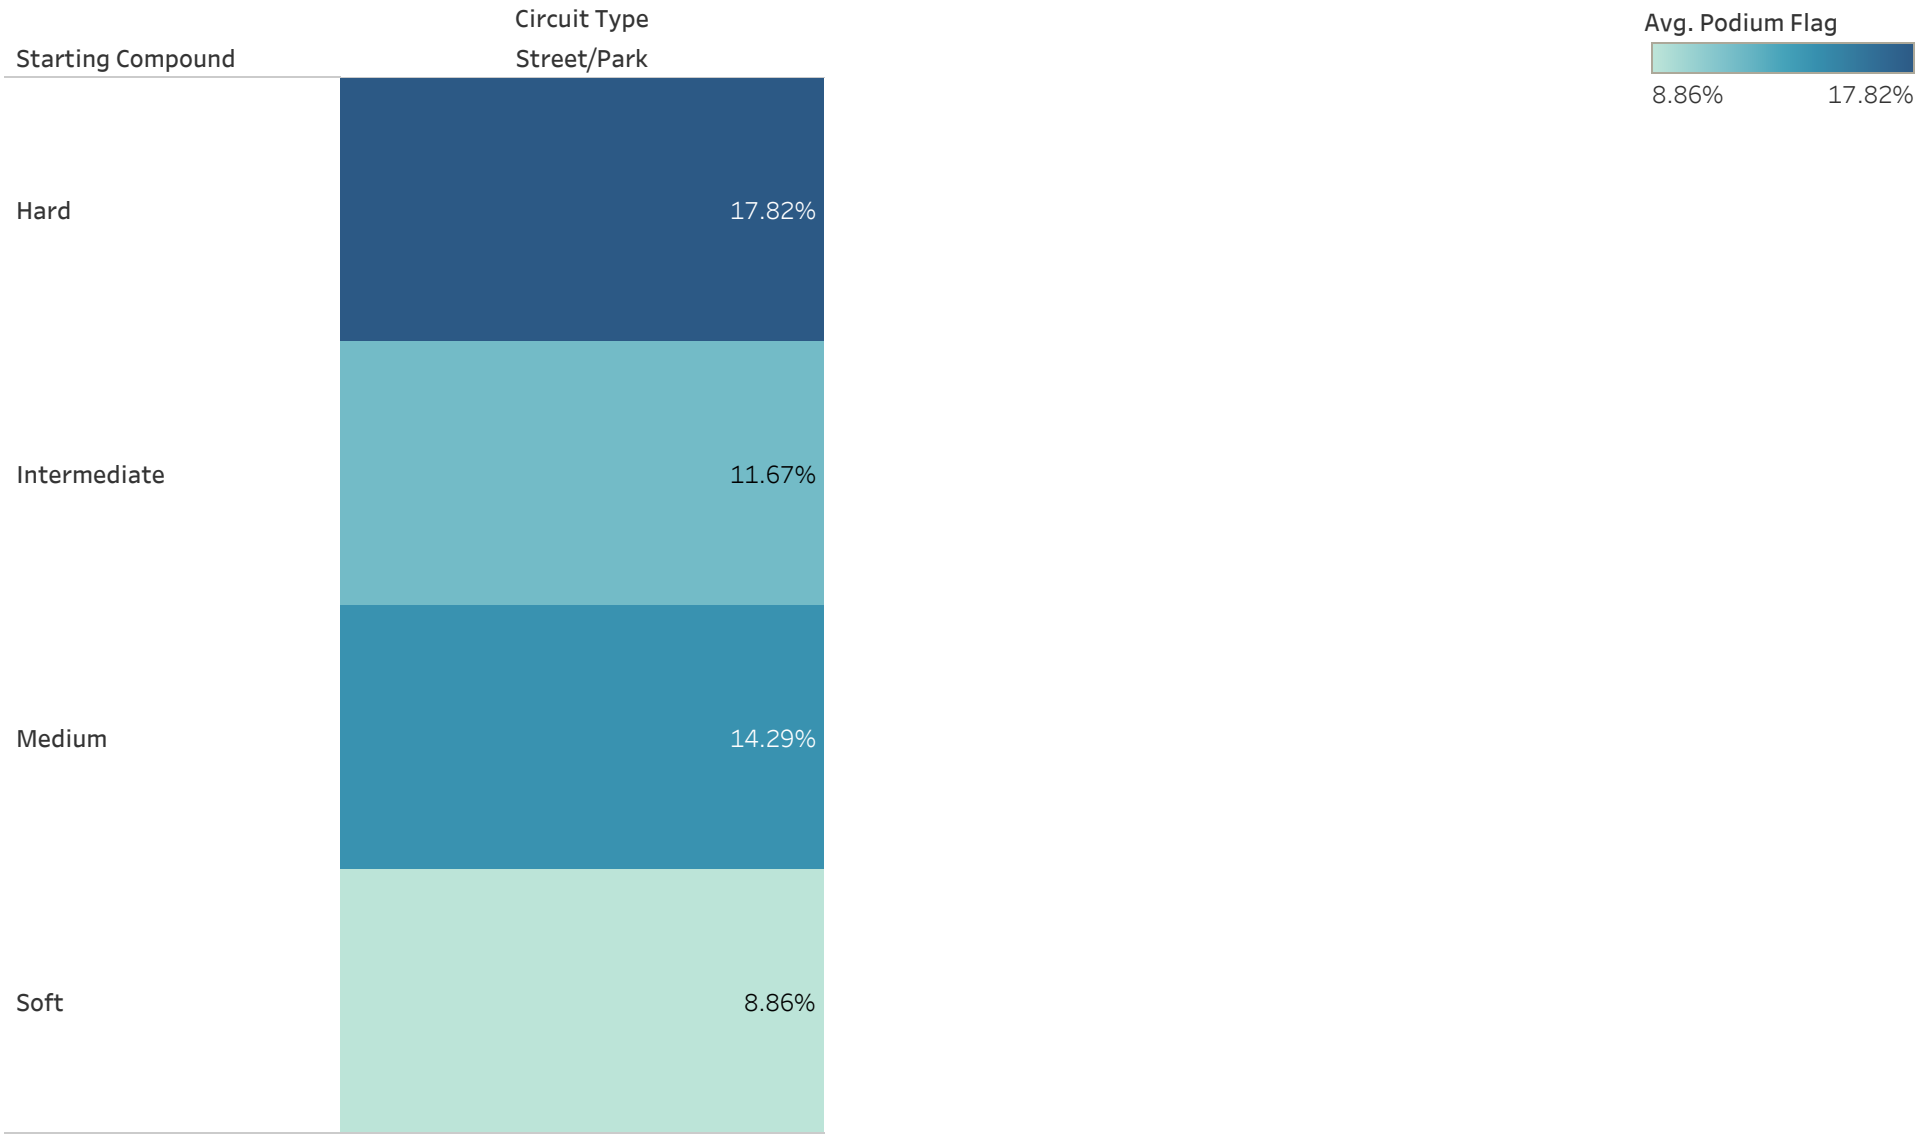

The trend of sum of Points for Season. Color shows details about Team. The view is filtered on Team, which keeps multiple members.

Podium Rate by Starting Tyre Compound and Circuit Type

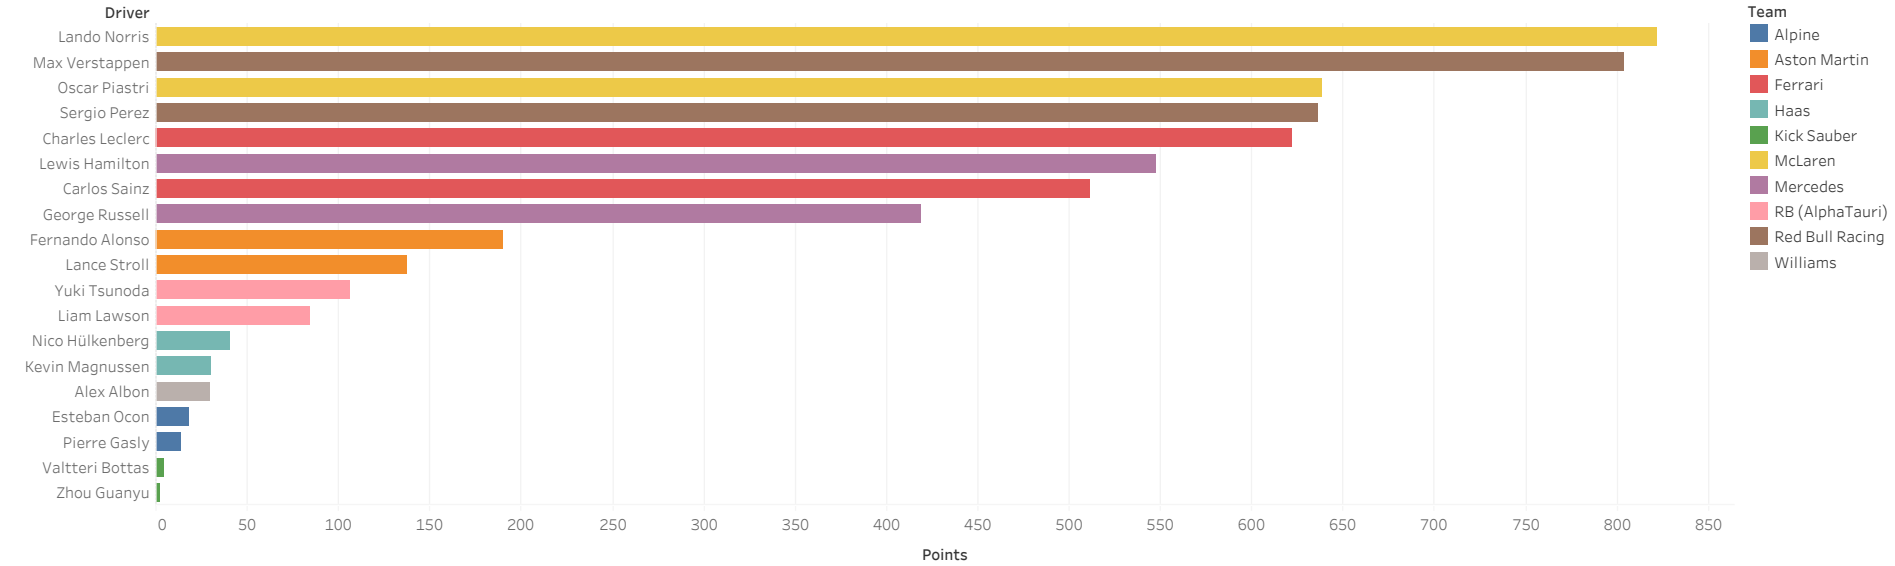

Average of Podium Flag broken down by Circuit Type vs. Starting Compound. Color shows average of Podium Flag. The marks are labeled by average of Podium Flag. The data is filtered on Season, which ranges from 2010 to 2026.

Podium Rate by Starting Tyre Compound and Circuit Type

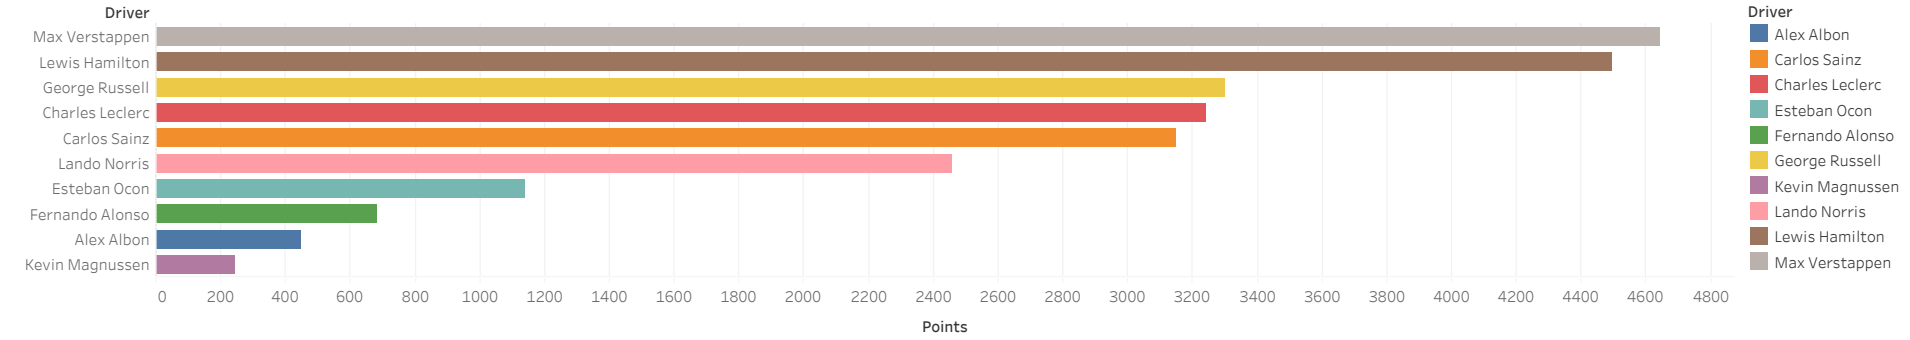

Average of Podium Flag broken down by Circuit Type vs. Starting Compound. Color shows average of Podium Flag. The marks are labeled by average of Podium Flag. The data is filtered on Season, which ranges from 2010 to 2026.

Top Drivers by Championship Points

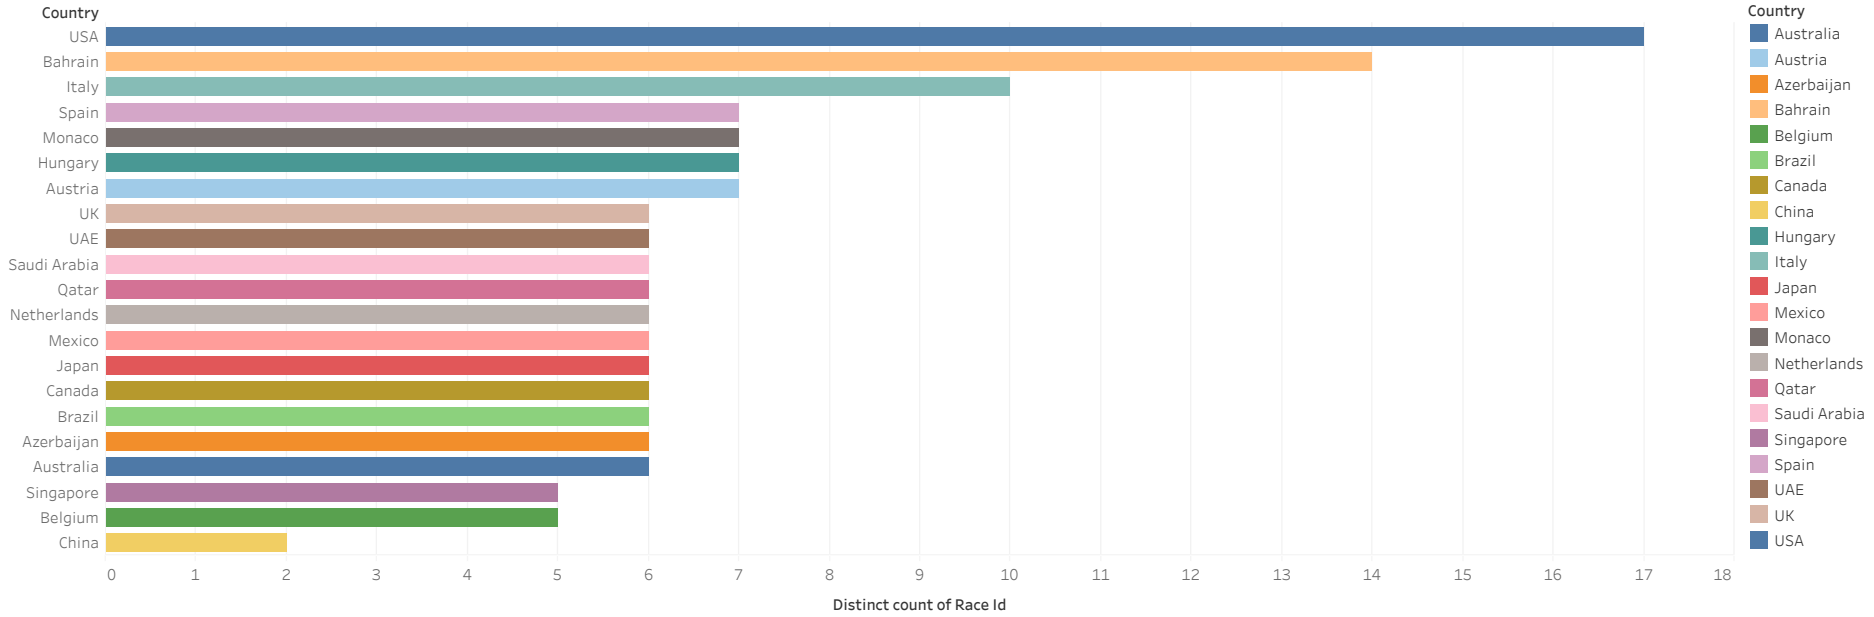

Sum of Points for each Driver. Color shows details about Team. The data is filtered on Season, which ranges from 2024 to 2026.

All-Time Driver Championship Points Leaderboard

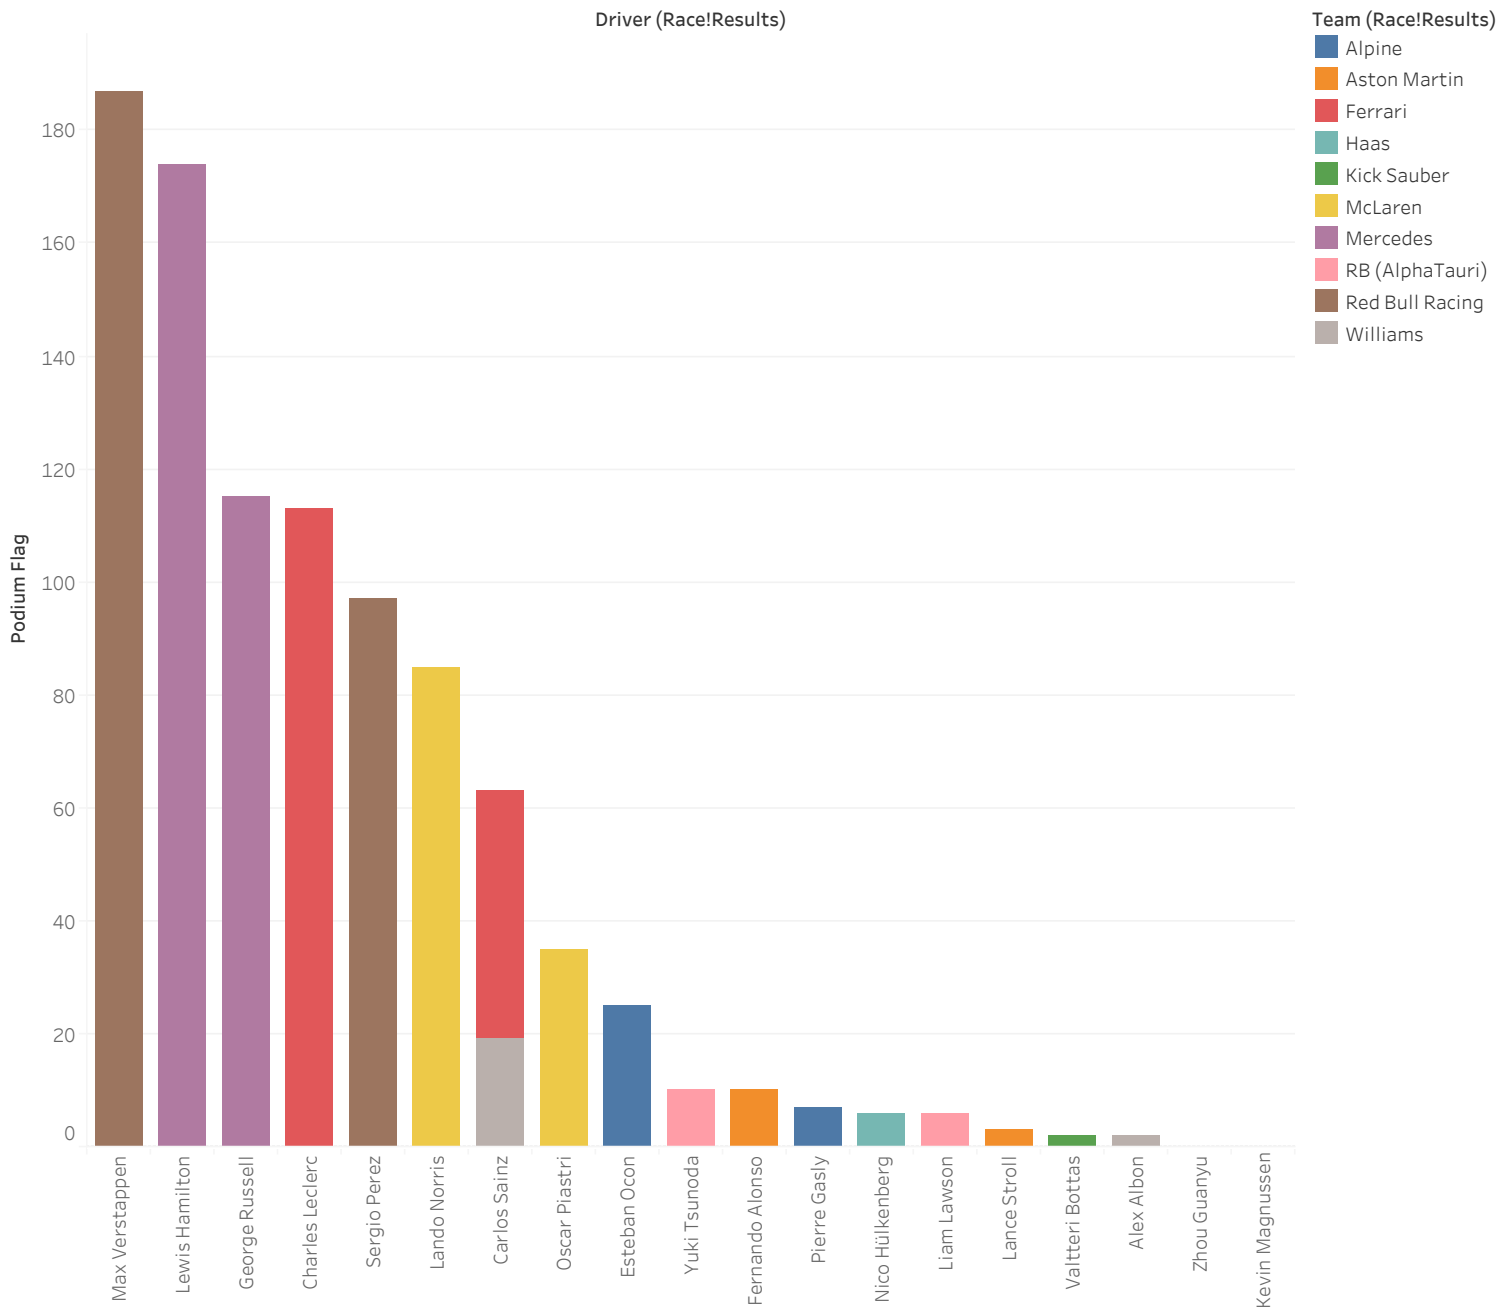

Sum of Points for each Driver. Color shows details about Driver. The view is filtered on Driver, which has multiple members selected.

Grand Prix Host Countries

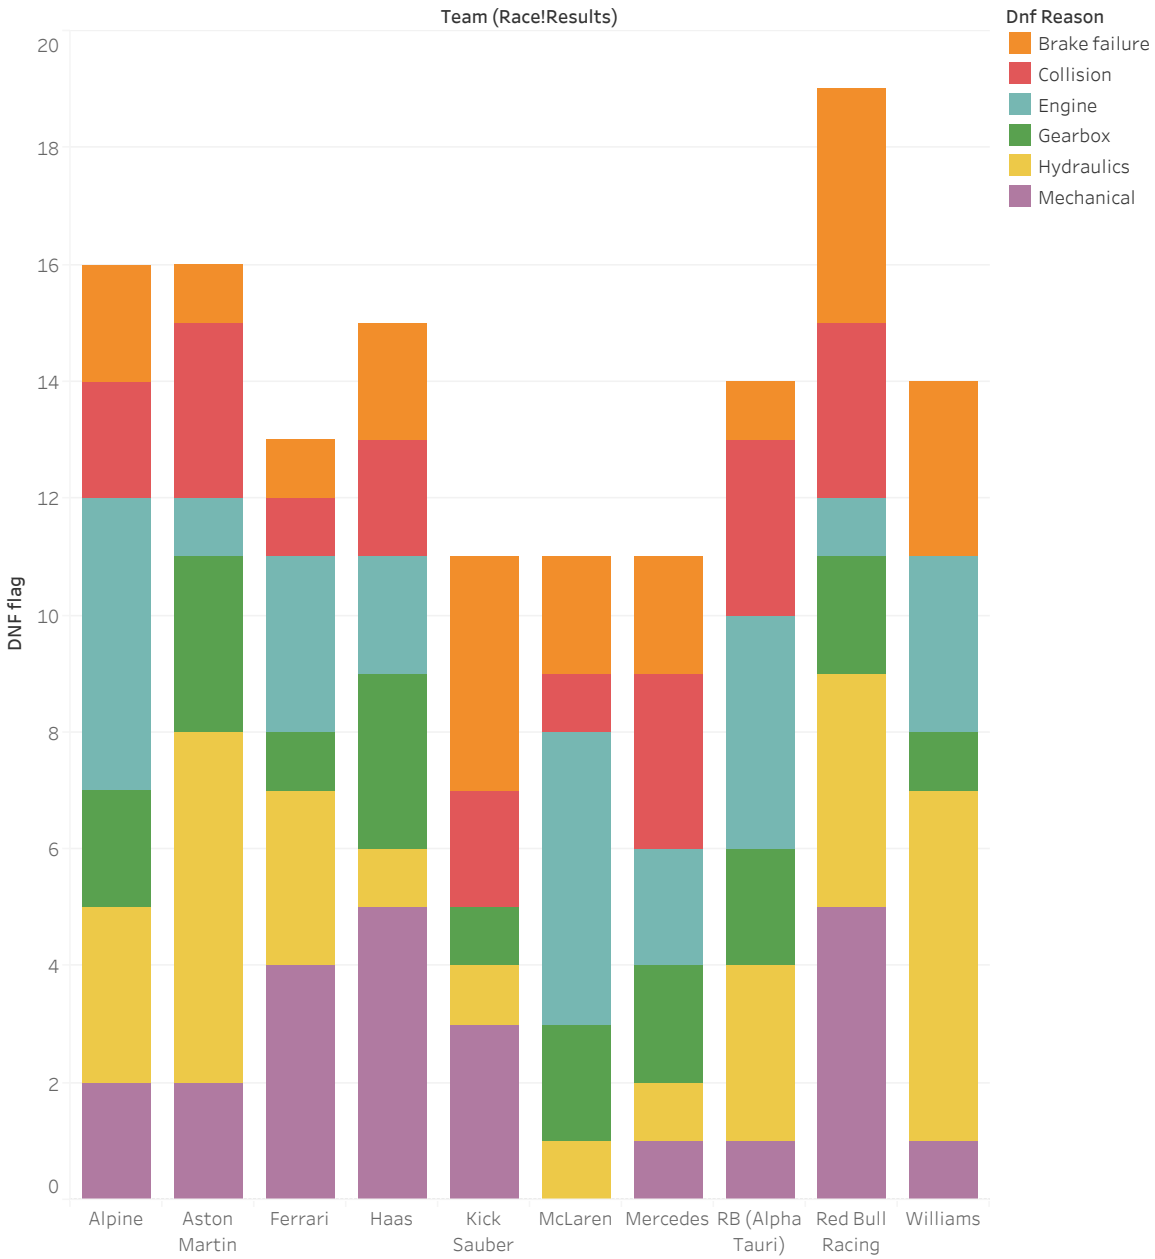

Distinct count of Race Id for each Country. Color shows details about Country. The data is filtered on Season (Race!Results), which ranges from 2020 to 2026. The view is filtered on Circuit Name as an attribute, Country and distinct count of Race Id. The Circuit Name as an attribute filter keeps no members. The Country filter keeps no members. The distinct count of Race Id filter ranges from 2 to 17.

Podium Finishes by Driver and Team

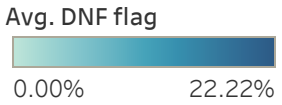

Sum of Podium Flag for each Driver (Race!Results). Color shows details about Team (Race!Results). The data is filtered on Season (Race!Results), which ranges from 2010 to 2026.

Failure Types by Constructor

Sum of DNF flag for each Team (Race!Results). Color shows details about Dnf Reason. The data is filtered on Circuit Type and Season (Race!Results). The Circuit Type filter keeps Permanent, Street and Street/Park. The Season (Race!Results) filter ranges from 2022 to 2026. The view is filtered on Dnf Reason, which keeps 6 members.

Driver DNF Rate by Circuit Type.

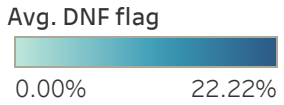

Driver (Race!Results)	Circuit Type: Permanent	Circuit Type: Street
Alex Albon	5.13%	0.00%
Carlos Sainz	5.13%	4.17%
Charles Leclerc	7.69%	0.00%
Esteban Ocon	10.26%	8.33%
Fernando Alonso	2.56%	16.67%
George Russell	5.13%	16.67%
Kevin Magnussen	10.26%	0.00%
Lance Stroll	10.26%	16.67%
Lando Norris	5.13%	0.00%
Lewis Hamilton	5.13%	8.33%
Liam Lawson	7.69%	0.00%
Max Verstappen	15.38%	0.00%
Nico Hülkenberg	5.13%	0.00%
Oscar Piastri	7.69%	0.00%
Pierre Gasly	0.00%	8.33%
Sergio Perez	10.26%	8.33%
Valtteri Bottas	7.69%	16.67%
Yuki Tsunoda	5.13%	0.00%
Zhou Guanyu	10.26%	0.00%

Average of DNF flag broken down by Circuit Type vs. Driver (Race!Results). Color shows average of DNF flag. The marks are labeled by average of DNF flag. The data is filtered on Season (Race!Results), which ranges from 2024 to 2026.

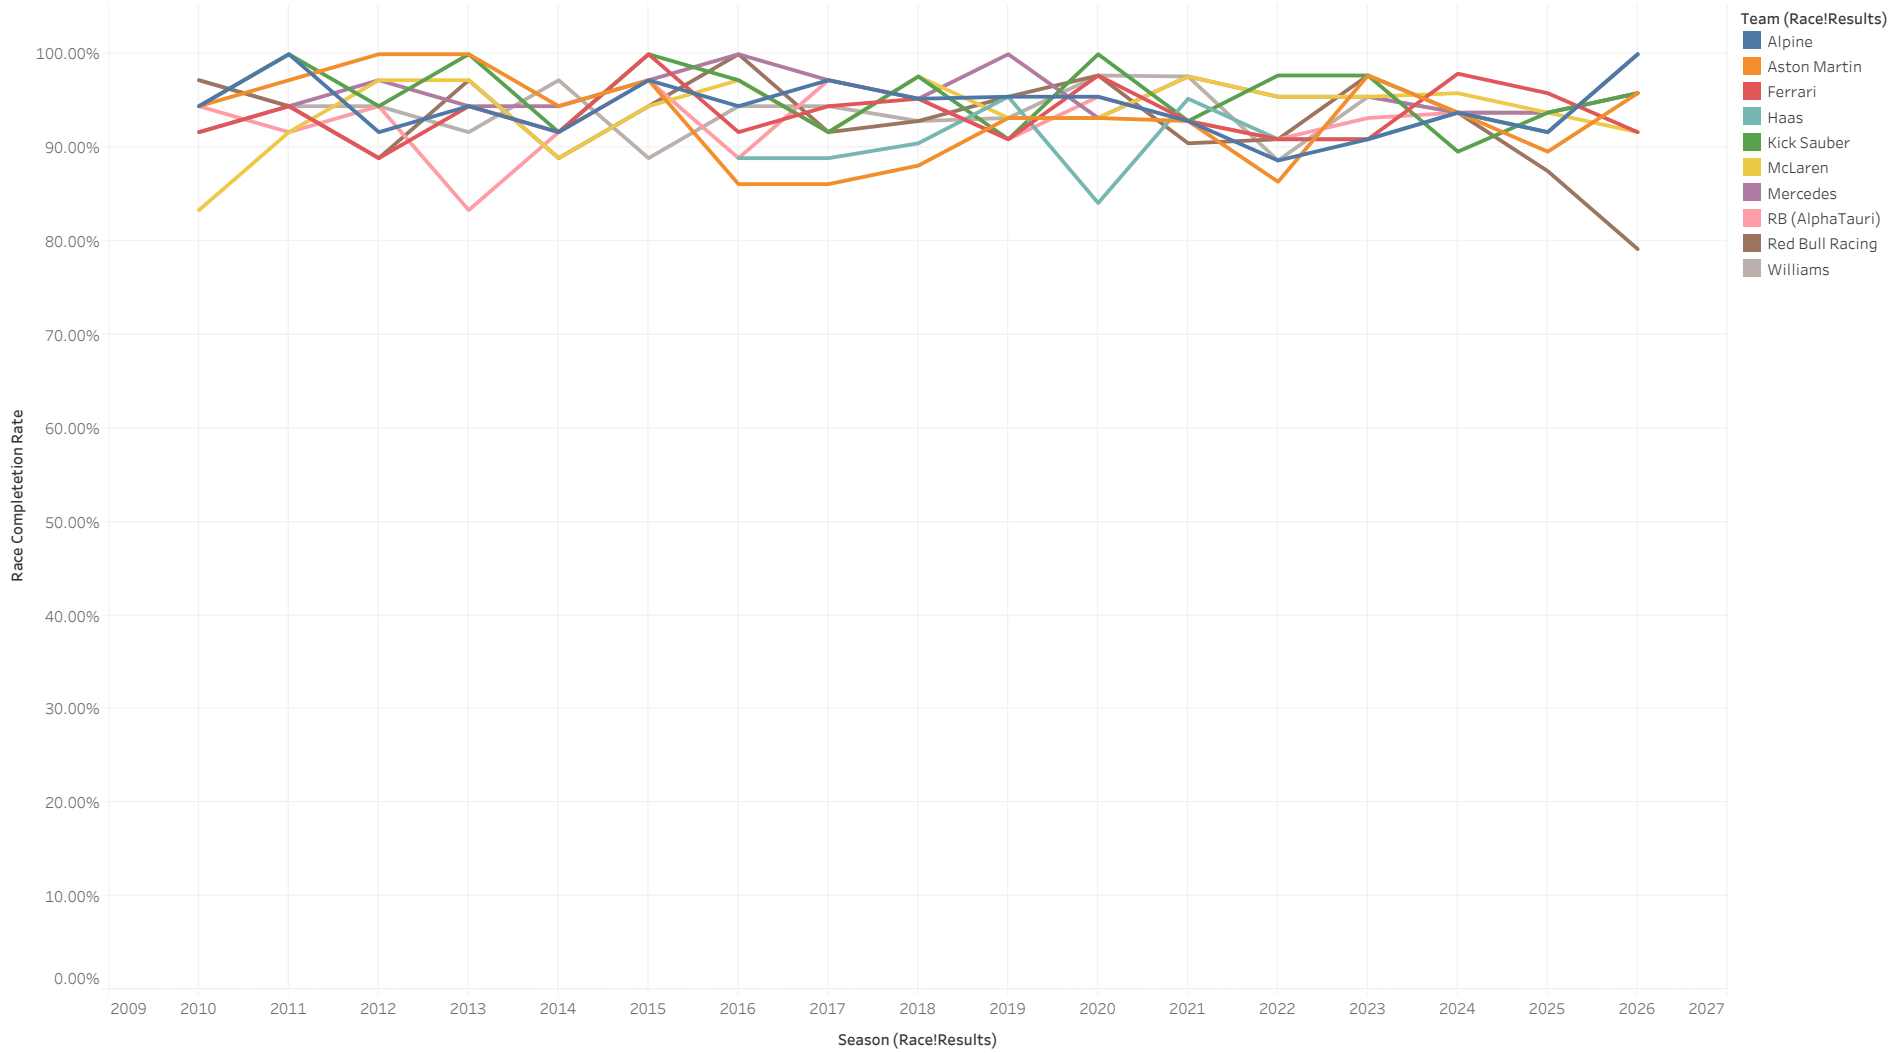

Driver DNF Rate by Circuit Type.

Driver (Race!Results)	Circuit Type Street/Park
Alex Albon	0.00%
Carlos Sainz	11.11%
Charles Leclerc	0.00%
Esteban Ocon	11.11%
Fernando Alonso	0.00%
George Russell	0.00%
Kevin Magnussen	11.11%
Lance Stroll	0.00%
Lando Norris	22.22%
Lewis Hamilton	0.00%
Liam Lawson	11.11%
Max Verstappen	22.22%
Nico Hülkenberg	0.00%
Oscar Piastri	0.00%
Pierre Gasly	0.00%
Sergio Perez	11.11%
Valtteri Bottas	0.00%
Yuki Tsunoda	11.11%
Zhou Guanyu	0.00%

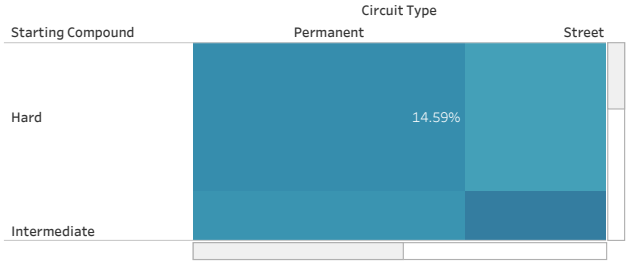

Average of DNF flag broken down by Circuit Type vs. Driver (Race!Results). Color shows average of DNF flag. The marks are labeled by average of DNF flag. The data is filtered on Season (Race!Results), which ranges from 2024 to 2026.

Race Completion Rate by Season and Team

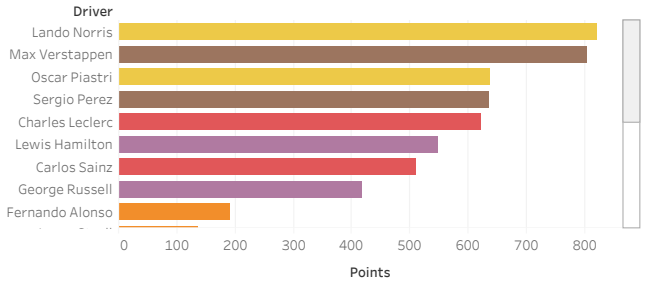

The trend of Race Completetion Rate for Season (Race!Results). Color shows details about Team (Race!Results).

This story explores Formula 1 racing data through three perspectives: team performance strategy, motorsport broadcasting, and technical reliability. Using Tableau, the data is transformed into nine visualizations that reveal patterns in championship standings, tyre performance, podium achievements, race retirements, and completion rates. The objective is to make racing data easier to interpret and support evidence-based analysis.

In the beginning , we observed years where red bull was topping the charts , however in 2012, they had a sudden dip in performance but they rose back up only to go completely down in 2014. As we can see , in the mid 2010's we observed the domination of mercedes , right after we observed a sudden rise in red bull's performance .

In the last two years, Lando Norris seems to be the one leading the points , mclaren and red bull also seem to be in a completely different league of their own in terms of points as their drives are all top 4. Kick sauber and Alpine drivers are struggling tremendously while mercedes and ferrari seem to be just on the verge of figuring out their point situation.

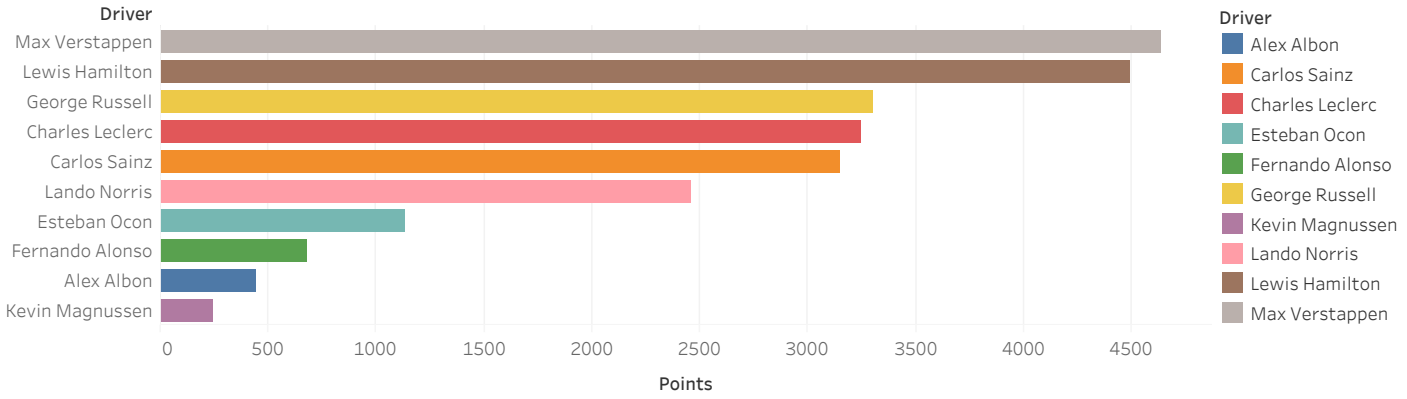

Formula 1 Analysis.

This graph shows the average podium rate (Avg. Podium Flag) across different starting tire compounds and circuit types for Formula 1 .As we can observe ,softs seem to be the way to go in both permanent and street tracks however , it is completely different for a street and park track as they seem to be horrid in that enviornment. Hards are very dominant in street tracks .

The graph shows us that Max Verstappen and Lewis Hamilton have a considerable lead over everone else . George Russel, Carlos Sainz and Charles Leclerc all are pretty close to each other's scores. The domination of Max and Lewis is clearly depicted by the graph as both drivers had periods of domination in the driver's championship.

In the last 4 years, it seems that the USA is leading the amount of grand prix's in the world. This of course makes sense as the USA has many circuits like Miami and the market of the USA is quite large and profitable for the FIA.

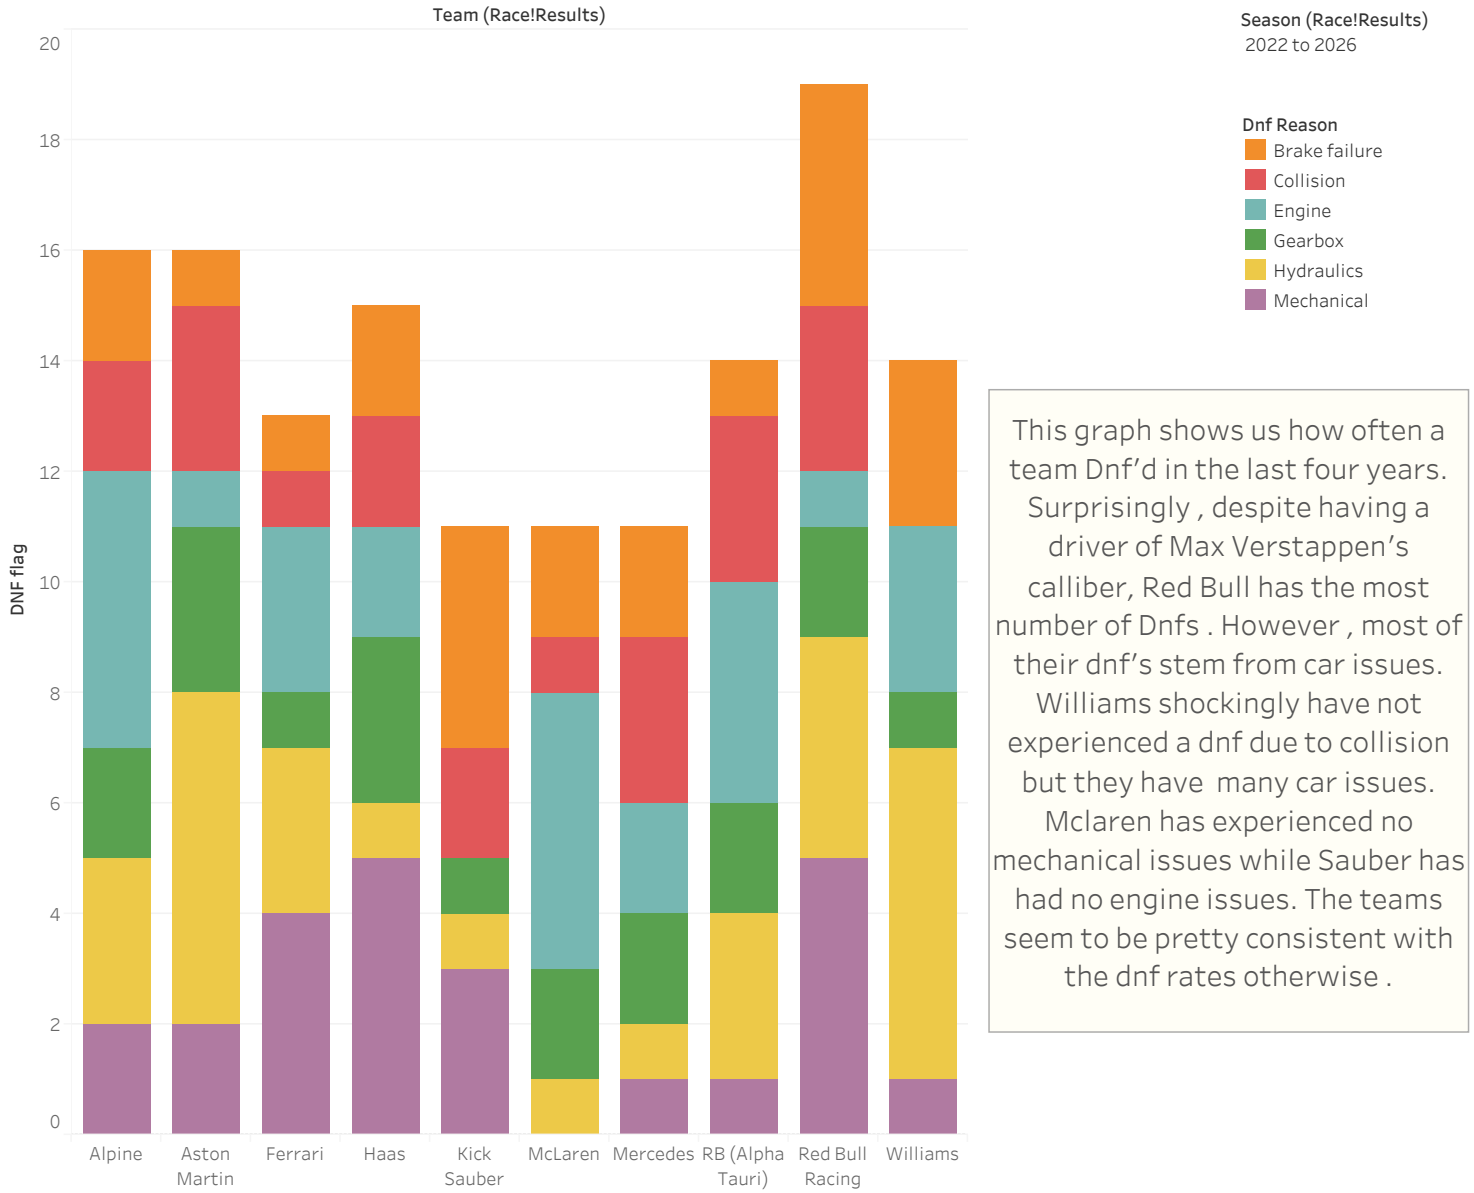

Interestingly , the other countries seem to have a pretty even number of GP's held at them , however, USA seems to have more and more races in it as time goes on.

Formula 1 Analysis.

This graph shows us how often a team Dnf'd in the last four years. Surprisingly , despite having a driver of Max Verstappen's calliber, Red Bull has the most number of Dnfs . However , most of their dnf's stem from car issues. Williams shockingly have not experienced a dnf due to collision but they have many car issues. Mclaren has experienced no mechanical issues while Sauber has had no engine issues. The teams seem to be pretty consistent with the dnf rates otherwise .

2024 to 2026

Avg. DNF flag
0.00% 22.22%

This graph shows us where these drivers struggle or do exceptionally at . Most drivers seem to be very good at street and park tracks and rarely dnf however Lando Norris and Max Verstappen struggle in park tracks however both do not dnf in street tracks. Valtteri Bottas , Fernando, George and Stroll struggle considerably in street circuits while everyone struggles in permanent tracks especially Max.

Formula 1 Analysis.

Formula 1 Analysis.

This project demonstrates how Tableau can turn Formula 1 data into an interactive analytical resource. The nine visualizations address team competitiveness and driver performance, broadcast statistics and podium achievements, and technical reliability and race completion. Together, they provide a structured way to explore racing patterns and support further investigation. The quality of the conclusions depends on data completeness, appropriate calculations, and careful interpretation.
