Important interpretation note

These figures are calculated from the dataset embedded in the supplied TWBX and are not independently verified official Formula 1 historical statistics. Validate season, driver and scoring definitions before external publication.

1. Team performance

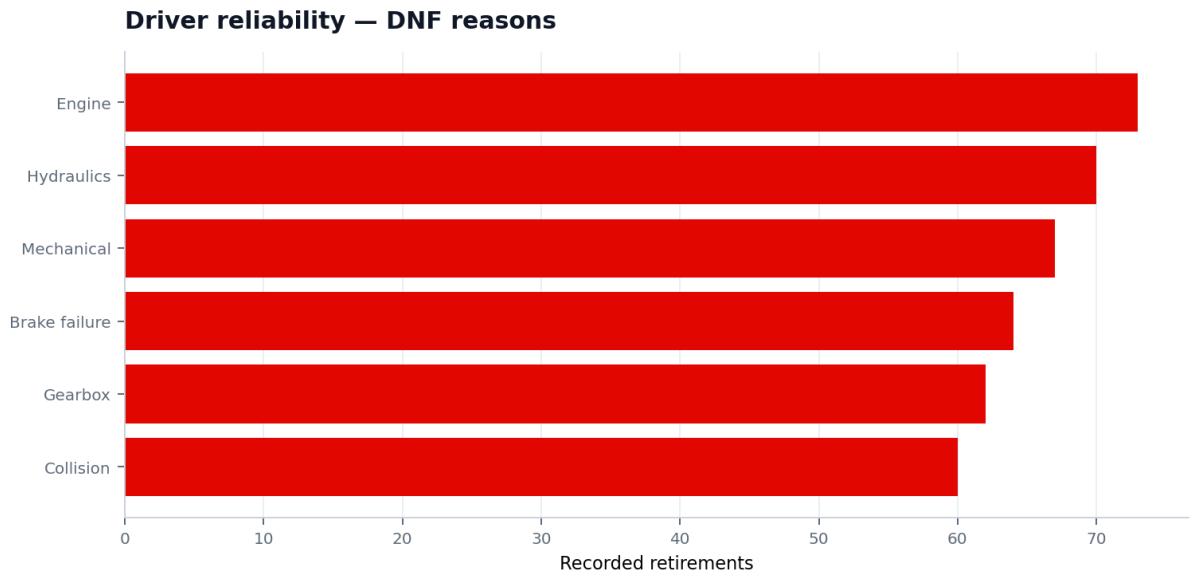

Cumulative points summarize recorded team outcomes across the included seasons. Totals depend on the dataset's coverage and scoring assumptions.

2. Driver reliability

The workbook records 396 retirements across 6,464 result rows (6.1% of rows). Engine is the most frequent listed reason, followed by Hydraulics. Labels represent the workbook's own classifications.

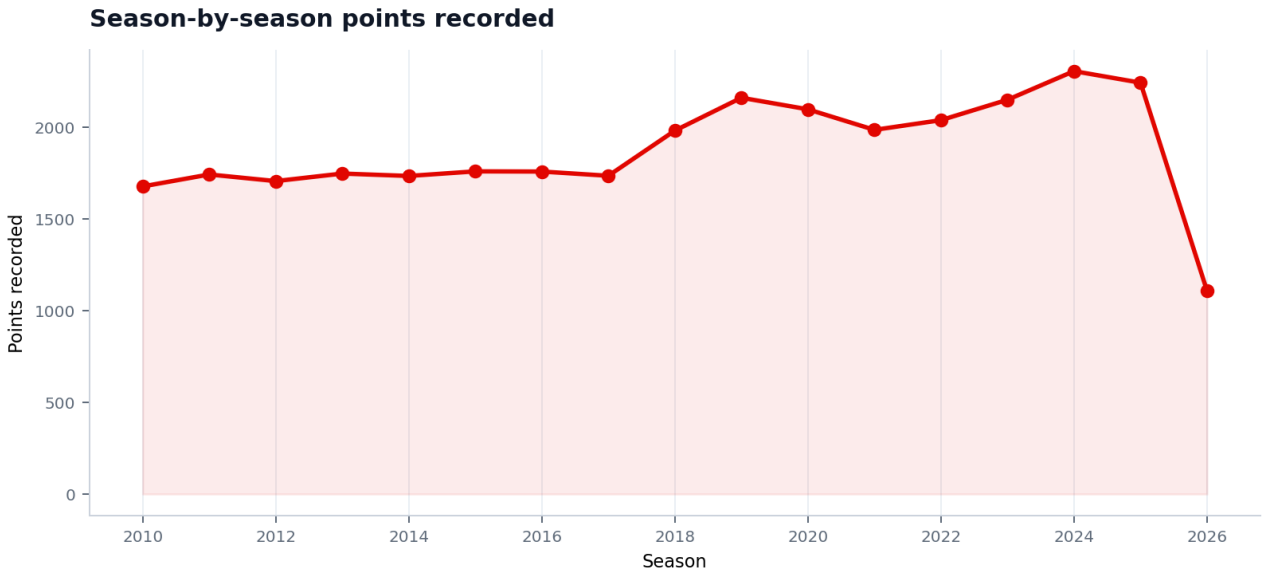

3. Tyre compound usage

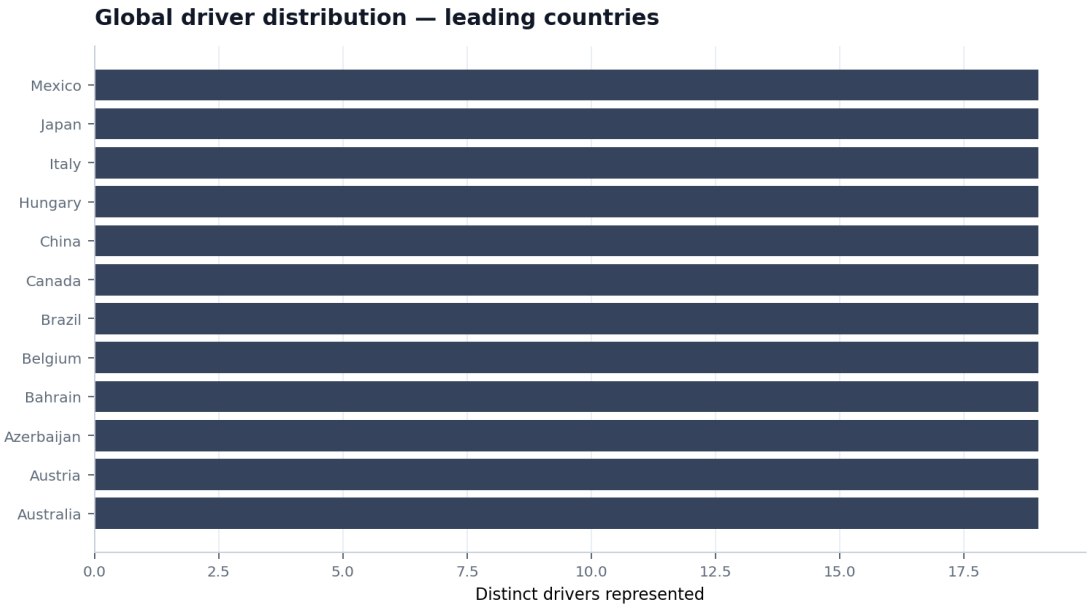

Lap-intelligence records show Soft, Medium and Hard as the most frequent compound labels. Counts represent lap records, not unique starts or tyre stints.

4. Season trend and global participation

Season totals are descriptive. Differences can reflect calendar size, team/driver coverage and dataset construction as well as performance.
