F1 RACING ANALYTICS

PROJECT CONCEPT AND PROPOSAL

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Project identity

F1 Racing Analytics — Race Data, Visualized. The supplied website presents an interactive Formula 1 analytics project focused on drivers, teams, race outcomes, tyre strategies, circuits, countries and podium finishes.

Project concept

The project turns Formula 1 race records into an interactive analytical experience. A Tableau dashboard provides broad exploration across nine views, while a separate Tableau Story focuses on driver points comparison through a configurable Top N leaderboard. A responsive website acts as the presentation and navigation layer.

Problem context

Formula 1 performance is multi-dimensional. A race result alone does not explain driver consistency, team competitiveness, reliability, tyre-related patterns, circuit context or podium distribution. The project organizes these perspectives into a dashboard and a focused story so a viewer can move from an overview to a more specific comparison.

Proposed solution

Use Tableau visualizations published through Tableau Public, embed the dashboard and story in a responsive HTML website, and explain the analytical purpose of each section. The site provides Overview, Dashboard and Story navigation, a high-level KPI summary, and an About section.

Project scope evidenced by the site

The site reports 10 competing teams, 17 seasons, 6,464 race outcomes logged and 29 circuits showcased. The dashboard description identifies reliability, driver and team performance, championship analysis, tyre compounds, country participation and podium analysis. The story is a Driver Points Leaderboard with a Top N parameter.

Deliverables evidenced

A public-facing HTML website; an embedded Tableau dashboard; an embedded Tableau Story; a KPI overview; descriptive project text; responsive layout and Tableau embed initialization code.

Project boundaries

The supplied HTML does not identify the raw dataset provider, exact season years, detailed metric formulas, cleaning operations, predictive models, backend service, database, or measured analytical findings. This document therefore does not claim those items as implemented.
