F1 RACING ANALYTICS

STAKEHOLDER AND USE CASE ANALYSIS

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Stakeholders

Primary audience: visitors exploring Formula 1 data. Secondary audience: project evaluators reviewing the dashboard, story and website. Project maintainers: people updating the HTML and Tableau publications.

Use case 1 — Explore project overview

Actor opens the website, reads the project introduction and scans the four KPI cards. Expected result: the visitor understands the stated data coverage before opening the visualizations.

Use case 2 — Explore dashboard

Actor selects Explore dashboard or Dashboard navigation. The page scrolls to the dashboard section, where the Tableau view is embedded. The visitor uses controls inside the published Tableau visualization to inspect the nine views.

Use case 3 — Explore driver points story

Actor opens the Story section. The Driver Points Leaderboard appears with a Top N control. The visitor changes Top N to narrow or expand the displayed driver ranking.

Use case 4 — Understand the project

Actor reads the About section, which explains the broad dimensions and the focused question addressed by the leaderboard.

User journey

Discover project → read headline coverage → open interactive dashboard → inspect selected analytical perspectives → open driver-points story → adjust Top N → interpret the comparison.

Usability considerations

The website uses sticky navigation, section anchors, descriptive button labels, a compact KPI grid and explanatory notes near the embedded visualizations. On small screens the KPI grid becomes two columns and the story layout stacks vertically.
