F1 RACING ANALYTICS

FEASIBILITY AND RISK ANALYSIS

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Technical feasibility

The supplied implementation is a static HTML/CSS/JavaScript presentation page using Bootstrap assets and Tableau Public embeds. This is technically straightforward to host as a static website, provided the referenced local assets are included and external Tableau/Google services are reachable.

Operational feasibility

A visitor needs a modern browser and internet access to load the external Tableau visualizations. The website itself provides navigation and explanatory text; the analytical interactions occur inside Tableau Public.

Economic feasibility

The supplied HTML does not document hosting charges, paid software costs or API fees. Tableau Public is the identified publication platform; no project-specific cost figures are available in the source.

Key risks

External Tableau availability; missing local Bootstrap files; third-party font or icon loading failures; long dashboard rendering time; mobile embed height; mismatch between KPI copy and the underlying workbook; and future changes to shared Tableau view identifiers.

Mitigations

Keep a tested copy of required local assets; verify both public Tableau links before release; test on mobile and desktop; re-check KPI values against the data source; document view identifiers; provide explanatory loading notes and maintain a fallback link to the public Tableau views.

Risk assessment limitation

Likelihood and impact scores are not provided because no operational test results or incident history were included in the supplied HTML.
