# F1 RACING ANALYTICS

USER INTERFACE AND VISUALIZATION DESIGN

| | |
|---|---|
| **Project** | F1 Racing Analytics — Race Data, Visualized |
| **Source basis** | Supplied f1_racing_analytics.html and its embedded Tableau references |
| **Document status** | Completed project-specific documentation based on available source evidence |

## Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

## Design language

The interface uses a motorsport-inspired dark theme. Core colors are background #101114, panel #191b20, secondary panel #202229, white text #f6f7f9, muted text #aeb3bd and red accent #e10600.

## Typography and hierarchy

Space Grotesk is used for headings and brand elements; DM Sans is used for body text. Large hero typography establishes the project identity. Section kickers, section titles and explanatory descriptions create a consistent hierarchy.

## Navigation design

A sticky top navigation contains Home, Overview, Dashboard and Story links. An Explore data call-to-action points to the dashboard. The brand mark uses a red F1 tile.

## Overview design

Four KPI cards show 10 competing teams, 17 seasons, 6,464 race outcomes logged and 29 circuits showcased. The cards use icon blocks, large numeric values and short labels.

## Dashboard design

The dashboard is placed in a white visualization frame with rounded corners. A short note tells visitors to allow time for Tableau to load and use controls inside the visualization.

## Story design

The story section combines an introduction with three explanatory cards: Compare performance, Adjust Top N and Takeaway. The embedded Tableau story follows this explanation.

## Responsive behavior

At widths below 991px the hero spacing is reduced, KPI cards become a two-column grid and the story layout stacks. Below 575px navigation spacing, card padding and heading sizes are adjusted.

## Visualization design principle

The website describes the questions and interaction patterns; detailed chart encodings, axes, aggregation logic and color legends reside in the Tableau workbook and cannot be fully inspected from this HTML file.
