F1 RACING ANALYTICS

EMBED INTEGRATION AND DATA FLOW

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Dashboard embed

The dashboard placeholder ID is viz1792514373277. The Tableau shared path is shared/9Z3NGD45Z. A static image fallback is referenced at https://public.tableau.com/static/images/9Z/9Z3NGD45Z/1.png.

Story embed

The story placeholder ID is viz1792514299867. The Tableau shared path is shared/JJ57Z8NDB. A static image fallback is referenced at https://public.tableau.com/static/images/JJ/JJ57Z8NDB/1.png.

Embed initialization sequence

1. Define dashboard and story embed IDs and dimensions. 2. Find each placeholder. 3. Find its Tableau object. 4. Detect whether the viewport is mobile. 5. Set width to 100% and choose desktop/mobile height. 6. Append Tableau's viz_v1.js script asynchronously.

Configured dimensions

Dashboard: width configuration 1657px, desktop height 3027px and mobile height 3627px. Story: width configuration 1016px, desktop height 991px and mobile height 1100px. The script applies width 100% while using these heights.

Data flow boundary

The HTML receives the published Tableau visualization through Tableau's embed mechanism. It does not show how the underlying F1 dataset was downloaded, cleaned, modeled or connected to Tableau.

Operational dependencies

Tableau Public must serve the shared views; the visitor must have network access; the embed API must load; and the HTML's local Bootstrap paths must resolve for full styling and navigation behavior.
