F1 RACING ANALYTICS

ANALYTICAL DASHBOARD AND WORKSHEET ANALYSIS

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Dashboard purpose

The dashboard is the broad exploration layer. The website states that it contains nine views and is intended to cover reliability, driver and team performance, championship analysis, tyre compounds, country participation and podium analysis.

Analytical view 1 — Reliability

Purpose: examine race completion and reliability-related outcomes. Interpretation should distinguish retirements, non-starts, disqualifications and other status categories if those fields exist in the underlying workbook. The HTML confirms the topic, not the exact calculation or chart type.

Analytical view 2 — Driver performance

Purpose: compare driver-level performance. Possible measures must be taken from the workbook; the separate story confirms that accumulated driver points are used in the leaderboard.

Analytical view 3 — Team performance

Purpose: compare constructor/team performance. The exact metric, aggregation and season filter are not stated in the HTML.

Analytical view 4 — Championship analysis

Purpose: explore championship-related patterns. The exact championship definition (drivers, constructors or both) and chart design are not specified.

Analytical view 5 — Tyre compounds

Purpose: explore tyre compound usage or related strategy patterns. The HTML names tyre compounds/strategies but does not identify compound labels, stint data, or a strategy calculation.

Analytical view 6 — Country participation

Purpose: explore the countries represented in the F1 data. The exact geographic field and counting method are not specified.

Analytical view 7 — Podium analysis

Purpose: inspect podium finishes. The HTML does not specify whether podiums are counted by driver, team, race, country or season.

Views 8 and 9

The page says there are nine views but only lists six broad analytical topic groups. The remaining view titles and the precise one-to-one mapping cannot be established from the supplied HTML. They should be read from the Tableau workbook rather than invented.

Dashboard URL

https://public.tableau.com/views/9Z3NGD45Z/1 — shared Tableau view identifier 9Z3NGD45Z.
