F1 RACING ANALYTICS

DRIVER POINTS LEADERBOARD STORY ANALYSIS

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Story purpose

The Tableau Story is titled Driver Points Leaderboard. It focuses on comparing leading drivers by accumulated points and allows the viewer to change the number of displayed drivers through a Top N parameter.

User question

How do the leading drivers compare on accumulated points, and how does changing the Top N selection affect the leaderboard?

Visual interpretation

The website instructs viewers to read the bars to compare driver point totals. The chart therefore communicates relative magnitude through bar length/height, while the parameter changes the number of drivers shown.

Interaction sequence

1. Open the Story section. 2. Inspect the driver points leaderboard. 3. Locate the Top N parameter control in the published story. 4. Change the parameter value. 5. Observe how the leaderboard expands or narrows.

Analytical value

A ranked leaderboard simplifies comparison of point totals and makes differences among leading drivers easier to spot. The website does not provide specific driver names, point totals, season context or a conclusion about who leads.

Interpretation cautions

Points totals can be affected by season length, scoring regulations, sprint formats and championship rules. The supplied website does not state whether points are normalized across eras or restricted to a single season. Avoid cross-era conclusions without confirming the workbook's scope and calculation.
