F1 RACING ANALYTICS

USER GUIDE AND PROJECT NAVIGATION

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Opening the site

Open the deployed F1 Racing Analytics website in a modern browser with internet access. The page title identifies the project as F1 Racing Analytics | Race Data, Visualized.

Navigation

Use Home to return to the hero section, Overview to see KPI cards, Dashboard to open the nine-view visualization and Story to jump to the driver leaderboard.

Understanding the overview

The four KPI cards summarize competing teams (10), seasons (17), race outcomes logged (6,464) and circuits showcased (29). These are coverage indicators, not performance scores.

Using the dashboard

Scroll to F1 Racing Analytics Dashboard. Allow the Tableau view to load. Use the controls inside the Tableau visualization to explore the available views. The page description names reliability, driver and team performance, championship analysis, tyre compounds, country participation and podium analysis.

Using the story

Scroll to Driver Points Leaderboard. Compare driver point totals using the bars. Change the Top N parameter to display more or fewer drivers. The exact control options depend on the published Tableau story.

About section

The About section explains that the project uses Tableau to explore drivers, teams, race outcomes, tyre strategies, circuits, countries and podium finishes.

Troubleshooting

If an embed is blank, check internet access and whether Tableau Public is reachable. If the page looks unstyled, verify the local Bootstrap CSS and Bootstrap Icons files. If fonts do not load, the browser will use fallback fonts. If the visualization appears clipped, test the desktop/mobile height configuration.
