F1 RACING ANALYTICS

LIMITATIONS AND FUTURE ENHANCEMENTS

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Data documentation limitations

The supplied HTML reports high-level counts but does not identify the dataset publisher, source URL, exact season years, row-level grain, field definitions, missing-value profile or data cleaning steps.

Analytical documentation limitations

The dashboard topics are named but the HTML does not reveal each sheet's exact title, chart type, axis, filters, calculated fields, aggregation or numerical findings. The remaining dashboard details must be read from Tableau.

Comparability limitations

F1 regulations and points systems can change over time. A 17-season comparison should document season coverage and scoring context before drawing conclusions across eras. The HTML does not describe any normalization method.

Technical limitations

The website depends on Tableau Public and third-party browser assets. The dashboard and story are embedded rather than rendered natively in the page. The dashboard has a large configured height; mobile behavior should be checked on real devices.

Future enhancement 1 — Data provenance

Add a source register with dataset publisher, URL, access date, licensing terms, season range and refresh date.

Future enhancement 2 — Metric transparency

Add a metric glossary explaining points, wins, podiums, reliability, tyre usage and championship calculations.

Future enhancement 3 — Detailed findings

Add concise written insights backed by actual dashboard values and screenshots.

Future enhancement 4 — Responsive refinement

Measure the embedded visualization dimensions on common viewport sizes and adjust heights to reduce excess whitespace or clipping.

Future enhancement 5 — Accessibility

Add accessible descriptions, keyboard checks, visible focus states and a non-visual explanation of key chart takeaways.

Future enhancement 6 — Reproducibility

Document source files, workbook version, transformation logic and update process.
