F1 RACING ANALYTICS

PROJECT DEMONSTRATION SCRIPT AND FLOW

Project	F1 Racing Analytics — Race Data, Visualized
Source basis	Supplied f1_racing_analytics.html and its embedded Tableau references
Document status	Completed project-specific documentation based on available source evidence

Document basis and evidence boundary

This document is populated from the supplied F1 Racing Analytics index.html. It uses the project's own wording and published KPI values. Where the HTML does not expose underlying data, formulas, workbook details or test results, that limitation is stated explicitly instead of inventing project facts.

Opening

Good morning. Our project is F1 Racing Analytics — Race Data, Visualized. It is designed to make Formula 1 data easier to explore through an interactive Tableau dashboard and a focused driver-points story.

Problem and objective

Formula 1 performance spans drivers, teams, race outcomes, tyre strategies, circuits, countries and podiums. Our objective is to bring these analytical perspectives together and provide a clear way to explore them.

Project overview

The website presents four headline coverage figures: 10 competing teams, 17 seasons, 6,464 race outcomes logged and 29 circuits showcased. These values provide a quick view of the project's stated coverage.

Dashboard walkthrough

Open the F1 Racing Analytics Dashboard. Explain that it contains nine views and that the project description identifies reliability, driver and team performance, championship analysis, tyre compounds, country participation and podium analysis. Demonstrate the actual charts from the published workbook.

Story walkthrough

Open Driver Points Leaderboard. Explain that the bars compare accumulated driver points. Change the Top N parameter and show how the number of drivers displayed changes.

Website implementation

Explain that the presentation website is built with HTML, CSS and JavaScript, uses Bootstrap layout assets and embeds Tableau Public visualizations through Tableau's JavaScript API.

Conclusion

The project connects a broad F1 analytics dashboard with a focused driver-points story. It provides a structured way to explore race-related information and compare leading drivers. Thank you.

Demo preparation

Before recording, verify both Tableau views, confirm the KPI figures, test the Top N control, check the local asset paths, test on the intended screen size and prepare screenshots in case the network is unavailable.
